RESULT 1 AEC02075 gene expression profile; metanephric mesenchyme cell; renal progenitor cell; cell therapy; tissue regeneration; nephrotropic; genitourinary disease; renal failure; genetic marker; 88; keratinocyte growth factor receptor. AEC02075 standard; mRNA; 3106 BP 09-FEB-2004; 2004AU-00900600. 09-FEB-2005; 2005WO-AU000162 18-AUG-2005. Nucleotide sequence of keratinocyte growth factor receptor AEC02075; WO2005075636-A1 Homo sapiens. 20-OCT-2005 (first entry)

(DNOW) UNIV QUEENSLAND.

Little M, Challen G;

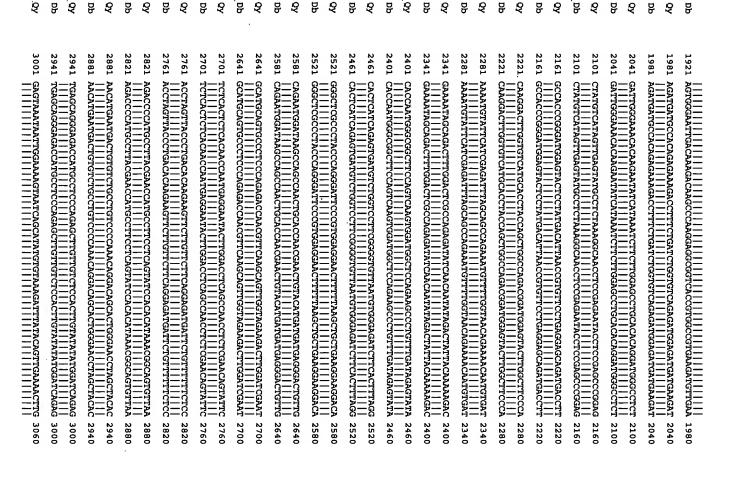

WPI; 2005-564566/57.

Identifying gene expression profile associated with metanephric mesenchyme development, comprises identifying genes e.g. sca-1 that are differentially expressed in metanephric mesenchyme cells at particular stage of embryonic development.

Example 2; Fig 8; 151pp; English.

The specification describes a method of identifying a gene expression profile associated with metanephric mesenchyme development, e.g. in renal

The method comprises identifying one or more genes that are differentially expressed at least 1.8 fold by one or more metanephric mesenchyme cells at a particular stage of embryonic development compared to one or more intermediate mesoderm cells. The method of the invention is useful for identifying a metanephric mesenchyme cell. These cells are useful for in vitro and in vivo generation of renal tissue, and are useful for treating disease such as acute renal failure, kidney transplant dysfunction and/or chronic renal failure. AEC02045-AEC02126 represent human genetic markers of metanephric mesenchyme/renal

Nucleic acid array useful for detecting cancer associated nucleic acid, comprises two or more nucleic acid probes.

SEQ ID NO 566; 198pp; English

CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.

CThe invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal CC with a composition comprising the polypeptide or its antigen binding CC fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the cambinedy and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of disposing cancer, a composition of a CA mucleic acid, a cell. The CA nucleic acids are useful for detecting CA complete acids. The antibody is useful for detecting the presence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for day cancer according cells in an individual. The invention is also useful for day according in a CA gene in a cell. This sequence represents human cancer-associated cDNA of the The invention relates to a nucleic acid array for detecting a cancer

The invention relates to a nucleic acid array for detecting a cancer CC associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more consisted polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, which is prepared by immunizing a host animal CC binds to a polypeptide, which is prepared by immunizing a host animal CC with a composition comprising the polypeptide or its antigen binding CC the antigen or its antigen binding fragment, a composition comprising the the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the CA mucleic acid, a method of detecting a CA nucleic acid, a method of diagnosing cancer, a comethod of detecting a CA nucleic acid, a method of diagnosing cancer, a complete acids in a cell. The CA nucleic acids are useful for detecting the presence of cancer cells in an individual which involves contacting CA complete acids. The antibody is useful for detecting the presence of cancer cells in an individual with the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The invention is also useful for diagnosing cancer acid. In an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer. This sequence represents human cancer-associated cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid array useful for detecting cancer associated nucleic comprises two or more nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 572; 198pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel predictor set comprising a plurality of polynucleotides and/or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase pathway. The molecules of the invention demonstrate cytostatic, antiangiogenic, vasotropic and vulnerary activities and may be useful in the field of pharmacogenomics, in particular for determining drug sensitivity and in treating breast cancer, hypervascular diseases, angiogenesis and scars in wound healing. The current sequence is that of a human protein tyrosine kinase biomarker DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Huang F,

                       The invention relates to a method of identifying a mammal that will crespond therapeutically to a method of treating cancer by administering can epidermal growth factor receptor (EGFR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an EGFR combilator. The method comprises: (a) measuring, in the mammal, the level of at least one biomarker identified in the specification; (b) exposing the mammal to the EGFR modulator; and (c) measuring in the mammal the compared to step (a) indicates that the measuring in the mammal the compared to step (a) indicates that the mammal will respond the respectifically to the method of treating cancer. The method and compared to step useful for identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermal growth factor receptor (EGFR) modulator. This sequence corresponds to one of the biomarkers whose levels of gene expression is measured in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ss; gene; cytostatic; epidermal growth factor

                                                                                                                              밁
                                                                                                                                                        S
                                                                                                                                                                                                                                                                                        CC antibacterial, immunosuppressive and antiinflammatory applications and CC may be used for early differential diagnosis, monitoring progression, CC assessing risk, assessing the likely response to treatment and for post comorted more missions of systemic inflammatory response syndrome, sepsis and CC sepsis-like conditions. The recombinant or synthetic nucleic acid CC sequences of the invention, or derived proteins or peptides, may be cuseful as calibrants in assays for the specified diseases, for evaluating CC activity or toxicity in screening for active agents and/or for CC preparation of agents for treatment or prevention of the specified CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic CC marker DNA fragment of the invention. Note: The sequence data for this CC patent did not form part of the printed specification, but was obtained CC in electronic format directly from WIPO at ftp. wipo.int/pub/published CC into account during indexing due to inconsistencies in application and CC contact during indexing due to inconsistencies in application and

The method comprises contacting a cell expressing a gene selected from SEQ ID NO. 1-12 or 25-85, with a compound. The method of the invention demonstrates anorectic applications and may be useful for excreening for compounds that reduce and/or prevent obesity. The current sequence is that of the human fibroblast growth factor receptor-2 transcript variant 2 DNA of the invention. The sequence listing for the specification can be located via the USPTO web-site.

The invention describes an assay (M1) for identifying compound alters physiological property of a granulocyte, by contacting a granulocyte with a candidate compound that interacts with a graselective marker, determining physiological property of a granu

contacting a
ts with a granulocytety of a granulocyte

rdiovascula rediovascula rediovascula rediovascula recell typ rece	after contacting with a candidate compound, and comparing the candidate compound alters the physiological property to determine whether the candidate compound alters the physiological property of a granulocyte. (M1) is useful for identifying a compound that alters one or more physiological property of a granulocyte. (M2) is useful for diagnosing a granulocyte disorder, or non-neutrophil granulocyte disorder or mast cell disorder, in a biological sample, where the biological sample is a blood sample and tissue sample. The non-neutrophil granulocyte disorder is a basophil associated tumor or cancer, where the basophil disorder is a basophil-associated for treating a granulocyte, where the basociated tumor or cancer. (M5) is useful for treating a granulocyte associated tumor or cancer. (M5) is useful for treating a granulocyte or mast cell-associated disease or mast cell-associated disease. The compound identified by (M1) is useful for treating a granulocyte or mast cell-associated disease, useful for diagnosing and treating mast cell disorders such as systemic mastocytosis, indolent mastocytosis, mast cell leukemia, cutaneous mastocytosis, indolent mastocytosis, and telengiecstasia macularis eruptive perstans. (M1) or (C1) is useful for drug discovery, disease elukocyte selective markers. (M1) or useful for drug discovery, disease elukocyte selective markers. (M1) is useful interacts with one or more cell type selective markers, and for diagnostic or prognostic purposes elukocyte selective markers, and for diagnostic or prognostic purposes elukocyte selective markers, and for diagnostic or prognostic purposes elections and constant in infections and eosinophilic colitis, eosinophilic gastritis, eosinophilic doddenitis, eosinophilic colitis, eosinophilic selections and eosinophilic colitis, eosinophilic selections infections in th

A The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies agains the antigen or its antigen binding fragment, a composition comprising the against sing the probes.

The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells in an individual, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated cDNA of the

The invention relates to a novel method for in vitro detection of CC systemic inflammatory response syndrome (SJRS). The method comprises CC detecting abnormal expression of disease-related genes, or their CC associated paptides. The method of the invention demonstrates and antibacterial, immunosuppressive and antihiflammatory applications and CC may be used for early differential diagnosis, monitoring progression, CC assessing risk, assessing the likely response to treatment and for post CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and CC sequences of the invention, or derived proteins or peptides, may be used for early differential diagnosis or peptides, may be conditions. The recombinant or synthetic nucleic acid CC sequences of the invention, or derived proteins or peptides, may be consistly in screening for active agents and/or for custivity or toxicity in screening for active agents and/or for activity or toxicity in screening for active agents and/or for preparation of agents for treatment or prevention of the specified CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic marker DNA fragment of the invention. Note: The sequence data for this CC marker DNA fragment of the invention at ftp.wipo.int/pub/published cot sequences. Furthermore, a number of a tfp.wipo.int/pub/published cot into account during indexing due to inconsistencies in application and control account during indexing due to inconsistencies in application and

The method comprises contacting a cell expressing a gene selected from SEQ ID NO. 1-12 or 25-85, with a compound. The method of the invention demonstrates anorectic applications and may be useful for screening for compounds that reduce and/or prevent obesity. The current sequence is that of the human fibroblast growth factor receptor-2 transcript variant 1 DNA of the invention. The sequence listing for the specification can be located via the USPTO web-site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     screening; obesity; nutritional disorder; anorectic; ds; gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2807
```

as EphA, VEGF, MET, RON, CSF, etc, useful treating cancer, or inflammatory, infectious, angiogenesis-related conditions, or disorders. immune

Example 1; SEQ ID NO 242; 647pp; English

The invention describes an isolated polypeptide, comprising at least one condition of an EphA or EphB receptor, where the polypeptide comparises an ephA in ligand binding domain and the polypeptide lacks one or more amino caride corresponding to the transmembrane domain of the EphA or EphB creeptor where the membrane localization of the polypeptide is reduced or abolished compared to the EphA or EphB receptor. The polypeptide is reduced or conditions, molecules and methods are useful for treating cancers, compositions, molecules and methods are useful for treating cancers, conditions involving angiogenesis, cell proliferation of cells, immune disorders and neurodegenerative diseases. The disease or condition is selected from rheumatoid arthritis, multiple sclerosis, posterior cintracocular inflammation, uveitic disorders, occular surface inflammatory disorders, neovascular disease, proliferative vitreoretinopathy, cell fundatory bowel disease, psoriasis, hemangioma, diabetes mellitus, inflammatory bowel disease, psoriasis, halphalmer's disease, luqus, condition is selected from carcinoma, lymphoma, blastoma, sarcoma, cervical ratherosis, restenosis, inflammatory joint disease, squamous cell cancer, small-cell lung cancer, squamous cell cancer, squamous cel parasite. The virus is selected from Myxoma virus, Vaccinia virus, Tanapox virus, Epstein-Barr virus, Herpes simplex virus, Cytomegalovirus, Herpesvirus saimiri, Hepatitis B virus, African swine fever virus, Parovirus, Human Immune deficiency virus (HIV), Hepatitis C virus, Parovirus, Respiratory syncytial virus, Measles virus, Vesicular influenza virus, Respiratory syncytial virus, Measles virus, Vesicular stomatitis virus, Sepue virus and Ebola virus. The combination is useful for treating angiogenic-related disorder, a tumor and/or an immune disorder. This sequence represents a cell surface receptor isoform polynucleotide.

Sequence 4587 BP; 1240 A; 1079 C; 1150 G; 1118 T; 0 U; 0 Other;

Disclosure; SEQ ID NO 576; 198pp; English

The invention relates to a nucleic acid array for detecting a cancer CC associated (CA) nucleic acid, comprising two or more nucleic acid probes. CC The invention also relates to a peptide array comprising two or more cisolated polypeptides encoded by a formation and that binds to a polypeptide, an isolated antibody or its fragment which CC with a composition comprising the polypeptide or its antigen binding CC fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the cC method of detecting a CA nucleic acid, a method of diagnosing cancer, a cm method of detecting a CA nucleic acid, a method of diagnosing cancer, a cC mucleic acid in a cell. The CA nucleic acids are useful for detecting CA cC mucleic acids. The antibody is useful for detecting a complex correlates with the antibody, where the detection of a CA cC protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in an individual. The composition is also useful for diagnosing cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for daynosing cancer invention.

CC cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated cDNA of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     중 유
The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADZ13044 standard; cDNA; 5000 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-JUN-2005
